

The Ocean is a Heart

Henry Johnson

The ocean is earth's heart
It pumps oxygen we need to breathe
It circulates our water and is fundamental for the planet
The heart deserves care
We would not contaminate our own hearts
We would not pollute them either
Because our hearts keep us alive and without them we are nothing
Instead we help our hearts
By making smart choices we keep our hearts healthy
We build ourselves up and keep clean
The ocean deserves this care
The ocean is our planet's heart
Our planet is our life
And therefore if our planet dies our hearts stop right beside
The ocean is our own heart and some don't realize
To treat our ocean poorly will bring us our demise
